

Innovative Foundations for Creative Play

By Postech Vancouver Island

A New Frontier in Playground Design

When it comes to building creative spaces that inspire imagination, KinsolPlay, a Vancouver Island-based company known for crafting unique timber playgrounds, took their designs to new heights this year. Located in Royal Bay, Colwood, BC, this latest KinsolPlay project features three towers and a boat, blending natural materials with robust engineering to create a fun, safe, and enduring playground for children to explore.

Solid Creative Spaces

Screw piles were the ideal choice as a foundation solution, offering quick installation, minimal disruption to the environment, and the ability to handle the uneven terrain of the site. Postech Vancouver Island's 24 screw pile solution ensured that Kinsol Play's artistic vision could be fully realized, without compromise on safety or durability.

Where Adventure Meets Engineering

KinsolPlay is celebrated for its nature-based, adventure-focused playgrounds, and this project is no exception. By incorporating Postech screw piles into their foundation design, they've pushed the boundaries of playground construction, opening the door to more creative possibilities. The towers and boat invite children to embark on self-directed adventures, while the hidden strength of the screw piles ensures that the fun is built to last.

About KinsolPlay

Since 2010, their award-winning designs have brought joy to communities across British Columbia and beyond. Committed to using local, sustainable materials, KinsolPlay creates spaces where children can safely explore, learn, and grow.
